GRAFFITI-NET GEL

DESCRIPTION

GRAFFITI NET GEL is a product designed for cleaning most graffiti from surfaces protected by a Polyfond® permanent anti-graffiti product. The product is made from biodegradable solvents. The viscosity (gel form) allows a better application on vertical surfaces.

GRAFFITI NET GEL is also available in liquid form (Graffiti-Net Liquid)

GRAFFITI NET GEL is also suitable for cleaning the graffiti on untreated surfaces but no guarantee can be given on the result.

APPLICATION FIELD

GRAFFITI NET GEL can be used on any type of surface treated with an anti-graffiti product from the Polyfond® range. It is highly recommended to clean the graffiti as quickly as possible with the product to avoid the penetration of the inks into the anti-graffiti film.

USE OF THE PRODUCTS

Shake before use and start by cleaning on small surfaces :

- Spray generously the graffiti with the GRAFFITI NET GEL, make sure the product penetrates the support;
- Leave to act for a few minutes. You rapidly see the dissolution of the inks on the surface.
- Clean with a cloth or a semi-hard brush until elimination of graffiti.
- Wipe the graffiti out with a dry cloth (do not spread the ink all over)
- Rinse the surface with water or with the GRAFFITI NET LIQUID

Repeat after a few minutes if the graffiti is not completely eliminated.
Always finish with a cautious rinse with water.

CLEANING OF THE MATERIAL

Immediately with water

STORAGE CONDITIONS

Two years in original closed container. Store in a well ventilated area at temperature between 5 and 30° C.

Our information on the technical product is used only as assistance to professional workers. During the implementation of our products, we always advise to start with a test on a small area.
